ABOUT **TERRA**

Terra is an open-source, public blockchain that hosts a vibrant and expanding ecosystem of applications. On Terra, you can build applications and organizations using the available suite of cutting-edge developer tools or try out existing apps simply by connecting a wallet.

The Terra ecosystem runs on its native cryptocurrency, LUNA. You can use LUNA to pay transaction fees on the Terra blockchain as you interact with various applications, earn staking rewards, purchase your favorite digital

art, vote on community-led governance proposals, and much more.

Build

Terra is permissionless and borderless, which means that its next-generation financial products are accessible to anyone in the world with an Internet connection.

To begin your journey on Terra, start by creating a Station wallet.
